

Package: SOIC 8

Product Description

RFMD's CGR-0118Z is a high performance 75Ω push-pull InGaP HBT MMIC amplifier utilizing a Darlington configuration with an active bias network. The active bias network provides stable current over temperature and process variations. Designed to run over a wide range of supply voltage, from 5V to 12V, the CGR-0118Z does not require a bias resistor as compared to typical Darlington amplifiers. The CGR-0118Z is designed for 75Ω return path applications where linear performance is needed over the frequency range 5MHz to 65MHz.

Amplifier Configuration

Features

- Flat Gain Response: 25.4 ± 0.3dB
- Excellent OIP3: 37.5dBm
- Superior Return Loss: >20dB
- Extremely Low CSO/CTB: -80/-67 dBc
- Low Noise Figure: 3.0dB
- Single Supply: 5V to 12V
- Low DC Current: 130mA

Applications

- CATV Return Path Amplifier
- CATV Line Amplifier
- Optical RX/TX

Absolute Maximum Ratings

Parameter	Rating	Unit
DC Supply (V_{CC})	14	V_{DC}
RF Input Voltage (Single Tone) (V_{IN})	65	dBmV
Operating Case Temperature Range (TC)	-40 to +100	$^{\circ}C$
Storage Temperature Range (T_{STG})	-40 to +150	$^{\circ}C$
RF Input (RFIN)	+24	dBmV

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2002/95/EC (at time of this document revision).

Pin	Function	Description
1	RFFB	Feedback pin. External DC-blocking capacitor is required.
2	RFIN	RF input pin. External DC-blocking capacitor is required.
3	RFIN	Same as pin 2.
4	RFFB	Same as pin 1.
5	RFOUT	RF output and bias pin (open collector).
6,7	BYPASS	AC ground/Bypass.
8	RFOUT	Same as pin 5.
EPAD	GND	Exposed area on the bottom side of the package must be soldered to the ground plane of the board for optimum thermal and RF performance. Several vias should be located under the EPAD as shown in the recommended land pattern.

Important Power Supply Note

The bias circuits used in 12V and 8V applications allow lower overall power consumption but can suffer damage from power supplies with fast turn-on times. To avoid the possibility of damaging the IC with supplies which ramp faster than 1ms, we recommend slowing the ramp by adding a series resistor and parallel capacitor on the Vdd line. This is not a requirement at 5V operation.
